

PIM-GUARD[®] SKEW FIGHTER

ANDREW has created an innovative solution to mitigate or eliminate skew on new or existing mounts: our new PIM-Guard[®] Skew Fighter. This new solution enables the addition of infinite incremental adjustable standoffs of up to 48 inches to new or existing mounts—allowing antennas to be positioned off the face of the tower and eliminating up to 20 degrees of skew while still keeping the antennas on the same plane.

This revolutionary product enables rooftop and tower mounts to meet carriers’ “zero skew” requirements. Azimuths that are not 120 degrees of separation on a three-sided monopole platform are not able to meet this goal without the PIM-Guard Skew Fighter. A fighter is required for each antenna pipe that must be extended from the tower face, and there is also an optional tie-back kit available for additional structural support where needed.

Features and benefits

- Infinitely adjustable standoffs from 0 to 48 in
- Supports up to 20 degrees of skew mitigation
- Optional tie-back kit available
- AT&T approved with item numbers

Ordering information

| Part number | Description | AT&T item master |
|---------------------------|-------------------------------------|------------------|
| 860678540 | PIM-Guard Skew Fighter 10-20 degree | ANT.59287 |
| SKA-TBK | PIM-Guard Skew Fighter Tie back kit | ANT.59284 |
